## Golf R It's an R Thing

It can be hard to pinpoint the origins of an emotion. Sometimes our feelings overcome us without reason or explanation. But some are so satisfying, so all-consuming and undeniable, that to rationalise them is to risk missing out on the extreme joy of the moment.

Volkswagen's Golf R is capable of inspiring passion, excitement and wonder. But, deep down, we all know it's just another car, right?

Not quite. The latest Golf R marks the next step in the evolution of a performance legend, a motorsport-inspired icon that has been thrilling drivers now for two decades. The first Golf R32 released in 2002 generated 177kW from its 3.2-litre six-cylinder engine and was the most powerful Golf ever produced. Fast forward to today and the eighth-generation Golf R has proudly taken on that mantle with its 235kW of power output.

Combine the Golf R's impressive powertrain with the exceptional agility and control offered by the vehicle's 4MOTION all-wheel drive system with R-Performance Torque Vectoring and you'll understand how exhilarating your next drive can be. At the same time, the Golf R is sophisticated, comfortable and functional enough to be driven every day.

With its performance styling taken from the track, impressive driver technologies, superb ride and handling, and array of premium driver and passenger features, the Golf R could just be the most completely immersive car on the road.

You may not know why you want one. You can't describe your reasons and they're anything but rational. But you'll soon find out why. It's an R thing.

# Exterior

Take one look at the Golf R's motorsport-inspired styling and you'll be left in no doubt of its performance potential. With its sleek lines, powerful posture and signature R styling, the Golf R is unmistakably a thrill-a-minute machine.

View the Golf R head on and you're struck by the vehicle's redesigned front bumper, prominent front spoiler and larger air intake. Impressive IQ.LIGHT matrix LED headlights with Dynamic Light Assist follow the contours of the Golf R's sculpted bonnet and feature daytime driving lights, dynamic and static cornering lights and a dynamic indicator.

The Golf R's lowered chassis is immediately apparent when the vehicle is seen in profile, its hunkered stance matched by body-coloured extended side sills and striking 19-inch 'Estoril' lightweight alloy wheels. The sporty theme continues at the rear, which features a large roof spoiler and premium LED rear tail lights with brake light effect and dynamic indicators. An aggressive-looking diffuser flanked by four chrome-plated twin tailpipes adds further to the Golf R's bold design statement.

Everywhere you look are reminders that this vehicle is the pinnacle of the Golf range. The R logo can be seen on the radiator grille, front wheel guards and rear tailgate. Meanwhile, signature R details can be found in the blue grille strip and matte chrome door mirrors.

For further proof of the vehicle's uniquely potent styling, you need only look at the Golf R's imposing blue brake calipers. As well as providing outstanding on-road performance and ruthless stopping power, they are quintessentially a Golf R hallmark.

Golf R model shown

# Interior

The interior of the Golf R is evocative, comfortable and supremely stylish all in one. Featuring a range of innovative technology and with superior appointments right throughout the cabin, you'll relish any drive you take.

Volkswagen's Innovision Cockpit is a fully digital driver display landscape that puts you right at the centre of the driving experience. It comprises a Digital Cockpit Pro made up of a cluster of three instruments, each of which can be customised and assigned to show performance indicators such as engine boost pressure or current power output. The instrument cluster is complemented by a high-resolution 10-inch Discover Pro Navigation System offering an array of infotainment options.

The Golf R's multifunction sports steering wheel with R logo provides precise control of vehicle direction, while capacitive touch controls take the place of conventional buttons and offer light-touch programming of vehicle functions. Bolstered leather sports seats with integrated head restraints covered in R style Nappa leather<sup>\*</sup> provide exceptional levels of comfort.

A feeling of unrivalled sophistication pervades the interior courtesy of carbon-style decorative inserts and selectable ambient lighting. The ambient light feature allows you to select one of 30 colours, including the Golf R's own signature R blue, so you can bathe the interior in your choice of light.

<sup>\*</sup>Leather appointed seats have a combination of genuine and artificial leather, but are not wholly leather.

Golf R model shown

# Performance

With this much performance at your beck and call, it's hard to imagine a more exhilarating driving experience than that offered by the Golf R.

The Golf R is the most powerful to date, with its 2.0-litre TSI engine generating 235kW and 400Nm of torque and capable of accelerating the Golf R to 100km/h in just 4.8 seconds.#

The prodigious powerplant in the Golf R offers stunning speed from a standing start, but it's matched by the vehicle's extreme agility and handling during fast cornering. The Golf R's 4MOTION all-wheel drive system with R-Performance Torque Vectoring distributes the engine's output not just between the vehicle's front and rear axles, but also variably between the two rear wheels. The all-wheel drive is networked via the Vehicle Dynamics Manager (VDM) with other running gear systems such as Extended Electronic Differential Lock (XDL) and Adaptive Chassis Control to give the Golf R outstanding grip and precise driving control.

For maximum driver enjoyment, it's possible to alter the Golf R's ride and handling characteristics by choosing from among six available driving profiles. Turn up the excitement by pressing the 'R' logo on the steering wheel to activate the 'Race' driving profile setting. Take it to the next level by selecting one of two exclusive R Performance driving profiles – 'Drift' for thrilling drifting capability away from public roads and 'Special', which has been tuned on the demanding Nürburgring-Nordschleife racetrack.

Of course, the Golf R has the looks to match its blistering on-road performance. With its lowered stance, large front air intake, body-coloured extended side sills and gloss black rear diffuser with four chrome exhaust pipes, the Golf R looks every inch a performance supercar.

Golf R model shown  
#The figures stated are for the purposes of comparison amongst vehicles tested under the same testing procedures only.  
The actual figure may vary depending on multiple factors such as fuel quality, vehicle load, environmental and road conditions.

# Technology

The latest generation of Golf R encompasses a suite of cutting-edge technology designed to provide assured driving enjoyment and the highest levels of safety.

Volkswagen uses the term IQ.DRIVE to denote all the latest driver assistance systems contained in the Golf R. Central to the IQ.DRIVE package is Travel Assist, which uses the combined functions of Adaptive Cruise Control (ACC) and Lane Assist to accelerate, brake and maintain the Golf R's position with its lane.\* The technology is especially suited to long journeys on the motorway.

A range of other safety features work in harmony to protect both driver and vehicle occupants. Front Assist technology helps reduce the risk of a collision by providing a visual and audible warning to the driver if no action is taken to avoid an accident, such as when a driver is slow to react to an impending collision. Driver Fatigue Detection also issues an alert if it assesses driver behaviour to show signs of tiredness.

Other systems that make up IQ.DRIVE, such as parking sensors, Park Assist\*, Rear View Camera\* (RVC) and Exit Warning System\*, are all there to promote everyday driver convenience.

No matter what the driving situation, optimal safety demands that driver distractions are kept to a minimum. That's why the Golf R's innovative Head Up Display\* is such a valuable standard inclusion. Essential driver information such as vehicle speed, driver assistance system messages and navigation instructions are projected onto the windscreen's surface, which means the driver never needs to avert their eyes from the road ahead.

\*Safety technologies are design to assist the driver, but should not be used as a substitute for safe driving practices.

# Audio and Optional Sunroof

The Golf R is packed with the latest advances to stimulate every drive.

The Golf R's delivers pristine and immersive sound, through its Harman Kardon premium audio system. Sophisticated and functional, the system has been designed to integrate seamlessly with the interior of the Golf R.

Exquisite acoustic quality means you can make every journey a unique experience in sound. By selecting from among four unique audio settings – Pure, Chill Out, Live and Energy – you can tailor the sound to suit your own preference. The system also delivers a power punch that has to be heard to be believed. Eight speakers plus centre speaker create an involving aural soundscape no matter the style of music. These speakers are paired with a subwoofer and 12-channel amplifier with 480 watts of total power for impressive bass response.

The Golf R's optional panoramic electric glass sunroof, is the perfect addition to a car already brimming with great features. Let glorious light stream into the cabin when you retract the sunroof shade – and open up the sunroof for the liberating feeling of the wind in your hair.

The print process does not allow for exact reproduction of the exterior or the upholstery colours. Please contact your Volkswagen Dealer for further information on colours and upholstery combinations.

# Find your accessories

Volkswagen Genuine Accessories ensures your Volkswagen remains 100% Volkswagen. The extensive range of Golf R Genuine Accessories provides you with the opportunity to adapt your Golf R even more precisely to your individual needs. From transport, exterior and interior solutions to alloy wheels that perfectly complement your Volkswagen.

- 01 Universal traffic recorder\*
- 02 All-weather floor mats
- 03 Premium Boot liner
- 04 R Dynamic hub cap
- 05 Roof bars
- 06 Roof box
- 07 Bike carrier
- 08 Ski and snowboard carrier

Overseas models are shown for illustrative purposes only. Optional accessories at extra cost. Please note that the above accessories may have an effect on fuel efficiency. Items such as sports equipment and tablets are shown for illustration purposes only and are not available for purchase from Volkswagen Group Australia or its Dealers. For a full range of Volkswagen Genuine Accessories, please refer to the accessories tab at [www.volkswagen.com.au](http://www.volkswagen.com.au) or visit an authorised Volkswagen Dealer.

\*The Volkswagen Universal Traffic Recorder App (UTR App) is only for use in combination with the Universal Traffic Recorder (UTR/Dashcam) of Volkswagen Genuine Accessories. Its capabilities include live viewing, data management, a car finder function and being able to adjust the recorder's settings. All functions of the Volkswagen UTR app require an active data service between the Universal Traffic Recorder and your smartphone. Configurations vary by model (Front only or Front/Rear camera). Consult your local Volkswagen Dealer for further information. The UTR App is compatible with all Apple iOS devices and Android devices up to and including Android 11.

# R Collection

Just like our R performance range, our premium R collection will also captivate with sleek styling, classic blue design notes and the iconic R badge. Get inspired by our exclusive R products and let your sporting spirit shine.

## 5 years Unlimited Kilometre Warranty

At Volkswagen, we pride ourselves on the highest quality standards that come with German engineering.

We back this commitment with a 5 year unlimited kilometre warranty on all new Volkswagen vehicles<sup>1</sup>.

## 1 year Roadside Assist

Every new Volkswagen comes with a 1 year Roadside Assist membership<sup>2</sup>.

That's 24 hour roadside assistance, emergency accommodation, car rental and towing as well as property and other assistance, all included for added peace of mind.

## Volkswagen Care Plans

Volkswagen Care Plans<sup>3</sup> have you covered for your first 3 or 5 scheduled services, providing you savings off the total Assured Service Pricing RRP. It's convenient, hassle-free scheduled servicing easily available for purchase at your local Volkswagen Dealer.

## Assured Service Pricing

Assured Service Pricing<sup>4</sup> gives you the comfort to know the cost of your first 5 scheduled services, when servicing your vehicle at any authorised Volkswagen dealership.

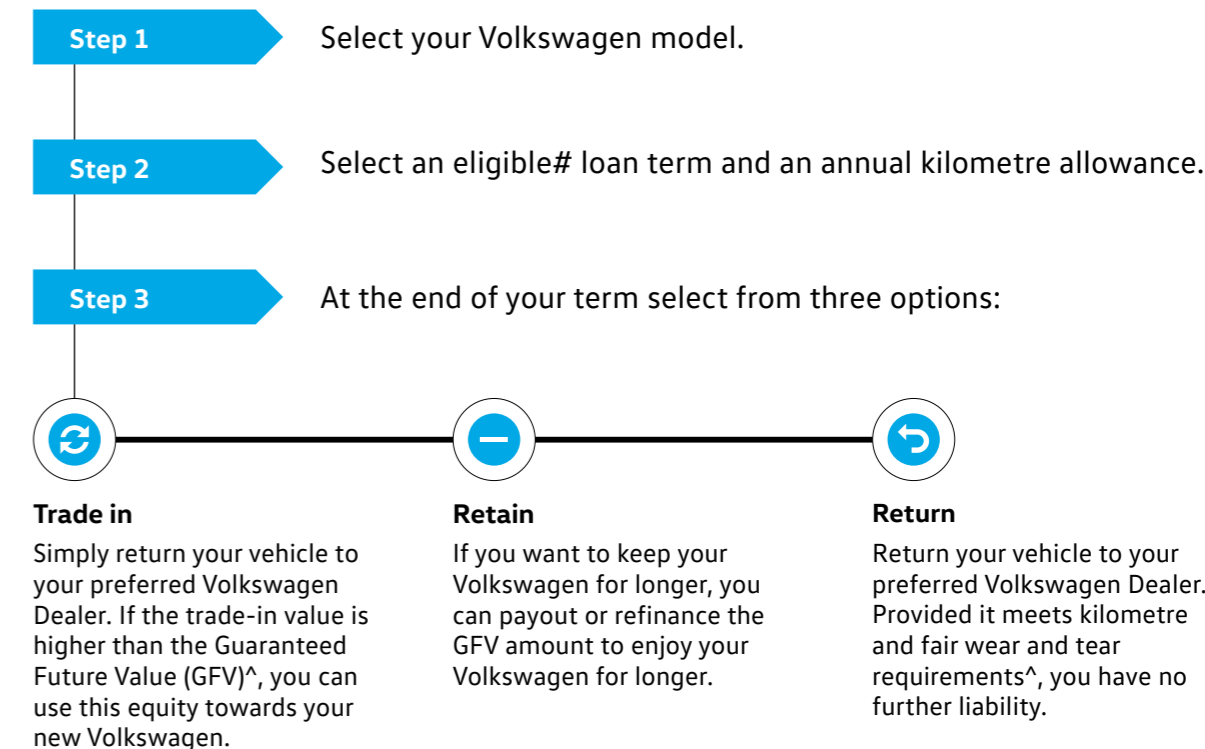

Our Volkswagen dealers have access to the latest diagnostic equipment and tools. Plus, they use Volkswagen Genuine Parts<sup>®</sup> to ensure your Volkswagen stays a Volkswagen.

# Volkswagen Choice<sup>^</sup>

Guarantee the minimum future value of your Volkswagen

Naturally we understand that your Volkswagen represents a valuable investment, so we understand that you want to maintain it in premium condition. Volkswagen Choice<sup>^</sup> is a finance program tailored to the requirements of Volkswagen owners by providing assurance around your Volkswagen's future value<sup>^</sup>, whilst offering simple monthly instalment financing options.

Whether you are selecting your new Volkswagen for business or personal use, you can choose the contract term that best suits your requirements. Enjoy the confidence that comes from having locked in a minimum value up front to be attributed to your vehicle at the end of your contract<sup>^</sup>. There are also no account keeping fees with a fixed interest rate.

1. Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners-service/warranty.html>. Your rights under this warranty are provided in addition to, and in some cases overlap with, consumer guarantees under the Australian Consumer Law and do not limit or replace them.

2. Volkswagen Assist (Roadside Assistance) Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners-service/service-repairs-parts/roadside-assist.html>

3. Volkswagen Care Plans are available for purchase at <https://www.volkswagen.com.au/en/owners-service/service-repairs-parts/care-plans.html> or from participating authorised Volkswagen Dealers for Eligible Vehicles and covers standard items as contained in each scheduled service interval only. The service intervals occur every 15,000 KM/12 months (whichever occurs first) for all models except MY18 to current Crafter vehicles and MY21 and MY22 Amarok vehicles, which are scheduled to occur every 20,000 km/12 months (whichever occurs first). These Care Plans can only be purchased prior to the first scheduled service and up to 22,500 km/15 months (whichever occurs first) for all models except MY18

to current Crafter vehicles and MY21 and MY22 Amarok vehicles which is 30,000 km/15 months (whichever occurs first). The timeframe takes effect from when the vehicle is first reported in our system as 'sold'. Discount structure varies by model. For details of what is not included in a scheduled service, please refer to the program terms and conditions.

4. Volkswagen Assured Service Pricing is current as at the date the customer obtains a price from the Volkswagen Service Pricing Guide or from a participating authorised Volkswagen dealer and is subject to change without notice. Customers are advised to confirm current pricing on the Volkswagen Service Pricing Guide or with an authorised Volkswagen dealer on the day of each scheduled service. Volkswagen Assured Service Pricing applies to the cost of standard items in each of the first 5 standard scheduled services of your vehicle which are scheduled to occur at every 15,000 km/12 month interval (whichever occurs first) or for MY18 to current Crafter vehicles and MY21 and MY22 Amarok vehicles only, 20,000kms/12 month interval (whichever occurs first). Exclusions and conditions apply. For more details on the eligible models, pricing, items not included and for full terms and conditions, please see <https://www.volkswagen.com.au/app/locals/service-pricing-guide>. Volkswagen Australia reserves the right to at any time modify or discontinue the Volkswagen Assured Service Pricing program.

<sup>^</sup>Volkswagen Guaranteed Future Value consists of an option to return your vehicle to Volkswagen Financial Services (VFS) ABN 20 097 071 460, Australian Credit Licence 389344, at the end of the term and requires VFS to purchase the vehicle at an agreed price determined by VFS, known as the Guaranteed Future Value (GFV). <sup>#</sup>Eligible loan terms include 12-60 months, vary by model and are subject to change, ask dealer for more information. At the end of the term, you can elect to: (1) trade-in; (2) return; or (3) retain the vehicle by paying the GFV, which is a lump sum owed to VFS at the end of the loan term after all repayments have been made. You will be liable for any loan contract deficit and additional charges if you exceed the nominated kilometre allowance and/or the vehicle is not in an acceptable condition. Available on new and demonstrator Volkswagen vehicles for selected models. Contact your Official Volkswagen Dealer to verify eligible vehicles for this program. Fleet, government, rental buyers, hire car and chauffeur companies excluded.

Rear	Ventilated discs

~ Emission level according to European Regulation (EC) No. 715/2007 and Regulation (EC) No. 692/2008, UN ECE R83/06 and later amendments.

\*The Start/Stop system is designed to reduce fuel consumption and CO<sub>2</sub> emissions. It achieves this by automatically switching off the engine while the vehicle is stationary and then starting it again automatically when the driver wants to drive off. There are certain operating conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information.

# Please note figures are sourced from overseas data where equipment levels by model variant may vary.

\*\* Fuel consumption figures according to ADR 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only.

# Glossary

## 4MOTION with R-Performance Torque Vectoring

The 4MOTION all-wheel drive system with R-Performance Torque Vectoring is the new control centre that distributes the engine's output to the four driven wheels.

A new rear final drive distributes the drive power of the turbocharged petrol engine in the Golf R not just between the front and rear axles, but also variably between the two rear wheels. This makes it possible to significantly increase the agility particularly when cornering.

The all-wheel drive is also networked via the Vehicle Dynamics Manager (VDM) with other running gear systems such as the Extended Electronic Differential Locks (XDL) and Adaptive Chassis Control.

Thanks to this close integration of the different systems, the new Golf R offers optimum traction characteristics and neutral handling with the utmost level of precision.

## Adaptive Cruise Control (ACC)

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the Golf approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Golf then accelerates up to the pre-set desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates in vehicles equipped with an automatic transmission. ACC can be reactivated automatically by depressing the accelerator pedal.

The dynamics of the ACC system can be individually varied by selecting one of the driving programs from the driving profile selection.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

## Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

## Anti-Slip Regulation (ASR)

ASR is a traction control system that prevents the wheels from spinning under acceleration by reducing engine torque.

## Auto Hold function

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicle's final braking pressure. So even when you take your foot off the brake pedal, all four wheels' brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

## Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

## Driving Profile Selection

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Comfort, Sport, Race and Individual.

The Comfort profile offers a comfortable but dynamic driving style with a softer suspension setting of the adaptive chassis control. Comfort mode has also been designed to enhance fuel efficiency by including coasting function and by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. Sport provides faster response of the accelerator pedal, sportier damping and steering. In Race mode, damping is increased (further reducing movements of the body structure) and shift points of the DSG are configured to be even more dynamic. The Race mode also provides access to two additional modes - the Drift profile for optimal driving dynamics away from public roads, distributing 100% of the rear torque to one wheel and the Special profile, in which the vehicle systems are adapted to the track characteristics of the legendary Nürburgring Nordschleife. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

## Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

## Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

## Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

## Emergency Assist

Emergency Assist monitors the driving characteristics and recognises, within the limits of the system, if the driver suddenly becomes incapable of driving (due to the vehicle not being controlled).

Emergency Assist detects a lack of activity on the part of the driver and issues repeated visual and acoustic warnings and initiates a quick jolt of the brakes and tensioning of the driver's seatbelt to request the driver to take control of the vehicle.

# Glossary

If the driver remains inactive, the system automatically controls acceleration, braking and steering to slow the vehicle down and keep it in the lane. If there is sufficient stopping distance, the system decelerates the vehicle to a complete stop and switches on the electronic parking brake automatically, parking position is engaged, the doors are unlocked and the interior lighting switched on.

When Emergency Assist is actively controlling the vehicle, the hazard warning lights are switched on and the vehicle horn may sound to warn other road users. Ideally this will prevent a collision, or at least reduce its severity.

Emergency Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Emergency Assist utilises both the Adaptive Cruise Control (ACC) and Lane Assist driver assistance systems. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

## Exit Warning System

While the Golf is stationary, the exit warning system warns the occupants about a potential collision when a door is opened. The system uses the rear radar sensors to monitor the area behind and to the side of the vehicle. Where possible, it detects objects, such as cars and cyclists, as they approach the vehicle from behind. When you open the door, the warning lamp on the exterior mirror flashes if another road user in a critical situation is detected. At the same time an acoustic warning signal is heard. The corresponding warning lamps also flash if another road user is detected in a critical situation while the door is already open.

Exit warning system cannot replace the driver's attentiveness. If the driver or passenger notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly.

## Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the front wheel on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

## Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 60 km/h, and calculates a fatigue estimate. If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning may be repeated once if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. The driving behaviour can be evaluated only when the speed is above approximately 60km/h. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

## Front Assist with Pedestrian and Cyclist Monitoring functions

The Front Assist ambient traffic monitoring system uses a radar sensor and multi-function camera to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

At vehicle speeds below 30km/h, the system monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, the brakes are first pre-charged and makes the Brake Assist system is made more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, emergency braking is independently applied. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, the system will deactivate and allow the driver to complete the avoidance manoeuvre.

Pedestrian and Cyclist Monitoring is an extension of the Front Assist monitoring system. The system uses a radar sensor in the radiator grille and windscreen mounted multi-function camera to monitor the area in front of the vehicle and within the limits of the system, register certain situations, for example a pedestrian stepping onto the road suddenly. The system then gives an immediate acoustic and visual signal to warn the driver. If the driver does not brake, the system initiates a jolt of the brake as a warning about the critical situation, while at the same time preparing for hard braking. If the driver fails to react, the system automatically performs emergency braking, within system limits. Ideally this will prevent a collision, or at least reduce its severity.

Front Assist with Pedestrian and Cyclist Monitoring cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

## Lane Assist

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle at speeds above 60km/h. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration. Additionally, if no active steering movements by the driver are recognised, a message will appear in the Digital Cockpit in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

## Manoeuvre braking

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised, emergency braking is initiated to minimise possible damage.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

# Glossary

## Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

## Oncoming vehicle braking when turning

"Oncoming vehicle braking when turning aims to prevent or reduce the impact of head-on collisions with vehicles when turning. The front radar sensor and windscreen camera are used to monitor the area in front of the driver's own vehicle. If a hazardous situation is detected – the driver turns into oncoming traffic, the vehicle is automatically braked and a warning issued to help prevent a collision. Key variables for detection of the turning manoeuvre are the steering angle and the steering-angle speed. A turning manoeuvre is detected even if the turn signal has not been activated. The function is active up to a speed of approximately 15 km/h."

Oncoming vehicle braking when turning cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

## Park Assist

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

## Proactive occupant protection system

The proactive occupant protection system incorporates active and passive safety elements. When the system detects a potential accident situation at speeds above approximately 30km/h, the occupants and the vehicle are prepared for a possible accident. Automatic reversible tensioning of the seat belts secures the driver and front passenger in their seats to attain the best possible protective potential of the airbag and belt system. The hazard warning lights are activated. In case of high transverse dynamics the side windows (and optional panoramic sunroof) are also closed, leaving just a small air gap. Closing of the windows offers optimal support to the head and side airbags which results in the best possible protection.

The latest generation of the Proactive Occupant Protection System can detect risks at the rear utilising the signals from the rear radar sensors for the Side Assist system. If the system recognises an immediate risk, the vehicle and occupants are prepared for a possible rear end collision by warning an approaching vehicle with fast hazard warning light frequency, closing the side windows (and optional panoramic sunroof), as well as tighten the front seat belts.

## Side Assist with Rear Traffic Alert

Side Assist with Rear Traffic Alert system supports the driver in assessing and avoiding dangerous situations, especially in critical situations, e.g. city and heavy traffic. Side Assist detects cars and motorcycles next to and up to 70m to the right and left behind your own vehicle and highlights these vehicles via a LED indicator in the door mirror at speeds above 15km/h. If you indicate to change lanes, the system calculates whether one of them could be dangerous due to position and speed and if deemed necessary will draw attention to this by flashing noticeably. In this instance, Lane Assist can also apply corrective steering to help avoid a collision.

Rear Traffic Alert monitors the traffic crossing behind the vehicle when reversing out of a parking space or manoeuvring. Utilising the Side Assist radar sensors in the rear bumper the system warns the driver of approaching traffic via an audible warning followed by a visual message in the Optical Parking System (OPS) and can also provide braking intervention if necessary to help avoid a collision.

Side Assist with Rear Traffic Alert cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

## Travel Assist

Travel Assist is an assistance system for partly automated driving. At the push of a button, Travel Assist can support the driver in monotonous and tiring driving situations commonly encountered on long motorway journeys. This system combines the functions of Adaptive Cruise Control (ACC) and Lane Assist with adaptive lane guidance to accelerate, brake and maintain the vehicles position within its lane. The capacitive steering wheel can detect whether the driver's hands are on the steering wheel in readiness to steer the vehicle and will issue a visual and audible warning when not detected.

Travel Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Travel Assist has been developed for use only on motorways. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.
